

# The Zero Data Loss Recovery Appliance

مروری بر دوره

course introduces Oracle's Zero Data Loss Recovery Appliance (Recovery Appliance) as a ground-breaking data protection solution that tightly integrates with the Oracle Database in order to address these requirements head-on. The course discusses how the Recovery Appliance eliminates data loss exposure and dramatically reduces data protection overhead on production servers. In addition, the course explains how the Recovery Appliance scales to protect thousands of databases, ensures end-to-end data validation, and implements full lifecycle protection including disk backup, tape backup, and remote replication

آنچه در این دوره خواهید آموخت

Describe the Recovery Appliance architecture and components, including Delta Push and Delta Store

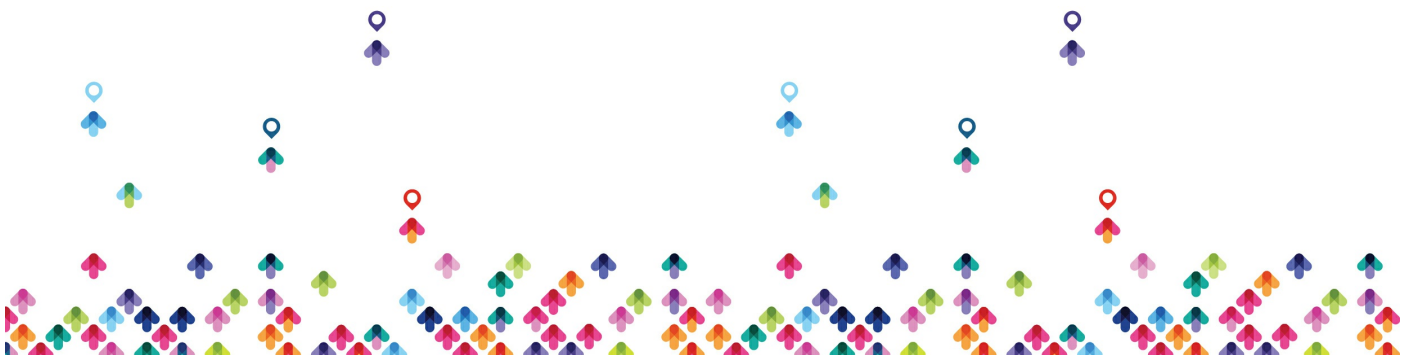

Compare the benefits of the Recovery Appliance versus traditional backup systems

Describe Recovery Appliance tools applicable for the database administrator

Employ best practices to implement the Recovery Appliance in your data center

Deploy Replication for Disaster Recovery configurations

Integrate the Recovery Appliance with Tape Libraries for Archival protection

Create reports for sharing with interested people

## مخاطبان دوره

همه کسانی که میخواهند با Oracle Exadata آشنا شوند و با آن در آینده کار کنند .

## پیش نیازها

آشنایی اولیه با دیتابیس اوراکل و همچنین سخت افزار
