

دوره جامع Cisco Wireless

دوره Cisco Wireless مهارتهای طراحی، پیکربندی، و مدیریت شبکههای بیسیم سازمانی با استفاده از تجهیزات سیسکو را آموزش میدهد.

مروری بر دوره

دوره Cisco Wireless به شما مهارتهای طراحی، نصب و مدیریت شبکههای بیسیم سیسکو می آموزد. این دوره شامل مفاهیمی مانند مبانی سیگنالهای RF، طراحی Site Survey، مدیریت زیرساخت فیزیکی و منطقی شبکه، پیادهسازی قابلیتهای Mobility، طراحی High Availability برای APها و controllers، و بهینهسازی QoS است. شما با ابزارهای مرتبط با این حوزه آشنا خواهید شد و می توانید شبکههای بی سیم پیچیده را طراحی و عیبیابی کنید.

سرفصل ها

1. RF Fundamentals

- 1.1 RF Signals and Modulation
- 1.7 RF Standards
- *\.*" RF Signals in the Real World
- 1.4 Understanding Antennas
- 1.a Wireless LAN Topologies
- 1.9 Understanding ATTIN Frame Types

r.• Wireless Site Survey

- Y.) Collect design requirements and evaluate constraints
 - ۲.۱.a Client density
 - ۲.1.b Real time applications
 - T.I.C AP type
 - Y.1.d Deployment type (data, location, voice, video)
 - ۲.۱.e Security
- Y.Y Describe material attenuation and its effect on wireless design
- Y.r Perform and analyze a Layer 1 site survey
- Y.F Perform a pre-deployment site survey
- Y.& Perform a post deployment site survey
- Y.P Perform a predictive site survey

• Y.Y Utilize planning tools and evaluate key network metrics (Chanalyzer, Spectrum Analyzer)

- ۳.• Catalyst ۹۸۰۰ Configuration Model
- ۳.1 Cisco C۹A++ Series Profile and Tag Considerations
- **f.** Wired and Wireless Infrastructure

• F.) Determine physical infrastructure requirements such as AP power, cabling, switch port capacity,

mounting, and grounding

• F.Y Determine logical infrastructure requirements such as WLC/AP licensing requirements based on the type

of wireless architecture

- f.r Design radio management
 - ۴.۳.a RRM
 - f.r.b RF profiles
 - ۴.۳.c RxSOP

f.f Apply design requirements for these types of wireless networks

- ۴.۴.a Data
- F.F.b Voice and video
- F.F.C Location
- ۴.۵ Design high-density wireless networks and their associated components
- **F.P** Design wireless bridging (mesh)
 - F.F.a Modes of operation
 - F.F.b Ethernet bridging
 - F.F.C WGB and roaming
- ۵.۰ Mobility and Client Roaming
- a.1 Design mobility groups based on mobility roles
- a.r Optimize client roaming
- a.r Validate mobility tunneling for data and control path
- ۵.۴ Mobility anchoring

- ۵.۵ Mobility encryption
- ۶.• WLAN High Availability
- ۶.1 Design high availability for controllers
 - ۶.۱.a Network availability through LAG
 - ۶.۱.b Stateful Switchover (SSO)
 - **P.N.C Anchor controller priority and redundancy**
- ۶.۲ Design high availability for APs
 - 9.Y.a AP prioritization
 - *۶.*۲.b Fall-back (assigning primary, secondary, and tertiary)
 - P.Y.C Embedded Wireless Controller (EWC)
- v.• FlexConnect and Office Extend
- Y.) Deploy FlexConnect components such as switching and operating modes
- Y.Y Deploy FlexConnect capabilities

- Y.Y.a FlexConnect groups and roaming
- v.r.b Split tunneling and fault tolerance
- Y.Y.C VLAN-based central switching and Flex ACL
- Y.Y.d Smart AP image upgrade
- v.r Implement Office Extend
- A. QoS on a Wireless Network
- A.1 Implement QoS schemes based on requirements including wired to wireless mapping
- A.Y Implement QoS for wireless clients
- A.r Implement AVC including Fastlane (only on WLC)
- ۹.• Multicast
- ٩.1 Implement multicast components
- ٩.٢ Describe how multicast can affect wireless networks
- ٩.٣ Implement multicast on a WLAN

- ٩.۴ Implement mDNS
- ٩.۵ Implement Multicast Direct
- **v**... Location Services
- 1... Deploy CMX and Cisco Spaces on a wireless network
- **\.**r Implement location services
 - **\.r.a Client tracking**
 - 1.1.T.b RFID tags (tracking only)
 - ۱۰.۲.c Interferers
 - ۱۰.۲.d Rogue APs
 - ۱۰.۲.e Clients
- **NOP** Security for Wireless Client Connectivity
- **WW Configure client profiling on WLC and ISE**
- **\).r Implement BYOD and guest**

- \\.r.a CWA using ISE (including self-registration portal)
- **NITE LWA using ISE or WLC**
- **NATIC** Native supplicant provisioning using ISE
- *wird* Certificate provisioning on the controller
- \\.r Implement A.r.\X and AAA on different wireless architectures and ISE
- 11.* Implement Identity-Based Networking on different wireless architectures (VLANs, QoS, ACLs)
- **NA TrustSec for SD-Access Wireless**
- **WP** Implement control plane ACLs on the controller
- *\\.*Y Implement device access controls (including RADIUS and TACACS+)
- ۱۲.• Monitoring
- **\Y.\ Utilize reports on PI**
- 1Y.Y Manage alarms and rogues (APs and clients)
 - \Y.Y.a WLC

- 17.7.b PI
- **\Y.T Manage RF interferers**
 - 17.۳.a WLC
 - 17.۳.b PI
- \r.f Troubleshoot client connectivity
 - 17.۴.a WLC
 - 17.۴.b ISE
 - 17.۴.C PI

پیش نیاز ها

تسلط بر مفاهیم شبکههای سیمی و بیسیم که در <u>دوره CCNA ار</u>ائه میشود.
